Professional Summary

Computer Science postgraduate with strong foundations in software development, data structures, and machine learning. Experienced in Python, C/C++, and deep learning frameworks, with hands-on research experience in medical image analysis and anomaly detection. Proven ability to teach, debug, and optimize algorithms, with published research in IEEE-indexed venues. Seeking research-oriented or software engineering roles.

Work Experience

Teaching Assistant – Data Structures Laboratory

Aug 2025 – Nov 2025

National Institute of Technology Calicut

- Conducted and supported undergraduate laboratory sessions covering arrays, linked lists, stacks, queues, trees, and graphs.
- Assisted in evaluation of lab assignments, ensuring adherence to coding standards and time complexity requirements.
- Clarified core concepts including recursion, memory management, and asymptotic analysis.

Training & Certifications

Machine Learning Training – Internshala

Jun 2023 – Aug 2023

- Trained in supervised and unsupervised learning algorithms including regression, classification, and clustering.
- Performed data preprocessing, feature engineering, and dimensionality reduction.
- Implemented ML models using `scikit-learn`, `TensorFlow`, `pandas`, and `NumPy`.
- Evaluated models using accuracy, precision, recall, and cross-validation techniques.

Projects

Brain Tumor Diagnosis Using Hybrid CNN–SVM Model

[IEEE Link](#)

- Developed a hybrid medical image classification system using EfficientNet-B3 for feature extraction and Support Vector Machine (SVM) for classification.
- Classified MRI brain images into glioma, meningioma, and pituitary tumor categories.
- Achieved high classification accuracy with reduced computational overhead.

Anomaly Detection in Wireless Sensor Networks Using GMM and Autoencoders

- Designed a hybrid anomaly detection framework integrating Gaussian Mixture Models (GMM), Autoencoders, and Local Outlier Factor (LOF).
- Detected real-time faults and abnormal patterns in sensor data streams.
- Improved detection accuracy and reliability in resource-constrained network environments.

Education

2025 – Present	M.Tech in Computer Science , National Institute of Technology Calicut	CGPA: 8.38
2020 – 2024	B.Tech in Computer Science , REC Kannauj, Uttar Pradesh	CGPA: 8.38
2019	Class XII, RBMJ Jaunpur, Uttar Pradesh	90.8%
2017	Class X, RBMJ Jaunpur, Uttar Pradesh	CGPA: 10

Publications

Maurya, Rohit et al. (2024). “Brain tumor diagnosis using hybrid pre-trained CNN-SVM”. In: *2024 IEEE 13th International Conference on Communication Systems and Network Technologies (CSNT)*. IEEE, pp. 868–873.

Technical Skills

- **Programming Languages:** Python, C, C++
- **Machine Learning:** Supervised & Unsupervised Learning, CNNs, Autoencoders, SVM, GMM
- **Deep Learning & CV:** TensorFlow, Medical Image Processing (MRI, CT)
- **Web Technologies:** Basic of MERN Stack (MongoDB, Express.js, React, Node.js)
- **Tools & Platforms:** Jupyter Notebook, Google Colab, MATLAB, Git/GitHub, MS Excel
- **Research Skills:** Literature Review, Dataset Preparation, Technical Writing
